## IT'S AN ODDS WORLD – What are the chances of winning?

Your odds of.....

- ▶ Winning the Euro Millions lottery jackpot: **one in 76,279,360.**
- ▶ Winning the current UK national lottery Lotto: **one in 14 million.**

**Now you know! - So there's more chance of.....**

- ▶ Being dealt a royal straight flush in a game of poker (AKQJ10): **one in 650,000.**
- ▶ Being struck by lightning in the UK in any one year: **one in 10 million.**
- ▶ Being hit by a meteor or asteroid in any year: **one in 700,000**
- ▶ Being murdered on a British street in a year: **one in 80,000**
- ▶ Dying on a transatlantic flight: **one in 23,000** crossings.
- ▶ Being killed in a UK road accident: **one in 6,000.**
- ▶ Being flattened by a UK bus on the way to buy a lottery ticket: **one in three million.**

**Than there is of winning the Lottery!**

Statistics from Robert Matthews, reader at Department of Physics, Aston University.

The sixth Murderous Maths book "Do You Feel Lucky?" explains that the chance of matching all six numbers in the UK's National Lottery draw is 1 in 13,983,816. However you can also win prizes if you match three, four, five or "five plus the bonus ball".

Some of the calculations which follow can be a little complicated but basically here are the approximate chances of all the different prizes:

JACKPOT (matching all six numbers): 1 in 14 million

FIVE PLUS THE BONUS: 1 in 2.3 million

FIVE: 1 in 55,000

FOUR: 1 in 1,000

THREE: 1 in 57

And just for interest, here are some other chances:

The chance of winning ANY prize: 1 in 54 (about 2%)

The chance of only matching 2 numbers: 1 in 7.5 (about 13%)

The chance of only matching 1 number: 1 in 2.4 (about 41%)

The chance of not matching ANY numbers: 1 in 2.3 (about 44%)

How to calculate the different chances

The main thing to know is that the total number of ways of choosing your six numbers is:

$${}^{49}C_6 = 13,983,816$$

JACKPOT CHANCE: only ONE of these ways will win you the jackpot, so the jackpot chance is 1 in 13,983,816 or about 1 in 14 million

MATCHING THREE NUMBERS: we have to work out how many ways you can select your six numbers so that three of them match up and three of them don't.

To start with, of the six numbers that are actually drawn, you need a combination of three of them, so how many combinations of 3 can you choose from 6 ? It's:

$${}^6C_3 = 20$$

Your other three numbers must come from the 43 numbers that are not drawn, so the number of combinations of 3 can you choose from 43 is...

$${}^{43}C_3 = 12341$$

To get the total number of combinations that include 3 matching numbers and 3 that don't match, you multiply these answers together.

You get  $20 \times 12341 = 246,820$ . That's how many ways you can match three winning numbers, so your chances of matching 3 numbers are 246,820 in 13,983,816. Obviously this looks a bit mind boggling, so to make it simpler you divide 13,983,816 by 246,820 to work out that the chance of matching 3 numbers is roughly 1 in 57

MATCHING FOUR NUMBERS: this time we need to see how many ways there are of picking four numbers from the winning six, and then multiply this by how many ways there are of picking two numbers from the 43 losers. The sums look like this:

$${}^6C_4 \times {}^{43}C_2 = 15 \times 903 = 13545$$

As there are 13,545 ways of matching four winning numbers, your chances are 13,545 in 13,983,816. It works out that the chance of matching 4 numbers is roughly 1 in 1,032

MATCHING FIVE NUMBERS: this time we need to see how many ways there are of picking five numbers from the winning six, and then multiply this by how many ways there are of picking one number from the 43 losers. (This last bit's easy: if you have a choice of 43 things and you can choose one, how many choices have you got? 43 of course!) Here's the sums:

$${}^6C_5 \times {}^{43}C_1 = 6 \times 43 = 258$$

This means there are 258 ways of matching five winning numbers, but before we look at the chances, remember that with some of these ways your sixth number will also match the bonus number.

MATCHING FIVE NUMBERS AND THE BONUS: The sums here are slightly different. Have a think about this:

You've just seen the main six numbers drawn on the lottery. You've matched five of them, and are leaping about the room and kissing the telly. The trouble is that ONE of your chosen numbers did not match up.

We've just seen that there are 258 combinations of five numbers that will match. The seventh "Bonus" number is about to be drawn, so what are the chances of your unmatched number matching the bonus? As 6 numbers have already been drawn from the 49, there are there are 43 numbers left that the bonus can be chosen from, so it's 1 chance in 43.

We've already worked out that there are 258 combinations that match five balls, and 1 in 43 of these combinations will have the sixth ball match the bonus. Therefore the number of combinations that match five numbers PLUS the bonus is  $1/43 \times 258 = 6$ .

This leaves  $258 - 6 = 252$  chances that match five numbers but NOT the bonus.

So for just five numbers, the chances are 252 in 13,983,816 which means the chance of matching 5 numbers without the bonus is roughly 1 in 55,491

And for five numbers and the bonus, the chances are 6 in 13,983,816 which means the chance of matching 5 numbers plus the bonus is 1 in 2,330,636 or roughly 1 in 2.3 million

Where does 13,983,816 come from?

The way the lottery works is that you have a card with the numbers 1-49 marked on it and you have to choose any six of them. What we need to work out is how many different ways you can choose 6 numbers out of the 49 available.

In maths we say "how many different combinations of 6 can we choose from a total of 49" and we write it with the numbers next to a big letter "C" as you can see in the diagram. To work it out you fill the numbers into the formula. (You can find out exactly where this groovy looking formula comes from in the book.)

$${}^{49}C_6 = \frac{49!}{6! \times (49-6)!}$$

To use the formula you need to know that the "!" sign is called a "factorial" which means you need to multiply the number by every smaller number down to 1. So for example  $5! = 5 \times 4 \times 3 \times 2 \times 1 = 120$ . (Some calculators have a ! button on them.) If we wrote the top line of this formula out in full we'd get  $49 \times 48 \times 47 \times 46 \dots$  right down to  $\dots 4 \times 3 \times 2 \times 1$ . The bottom line is  $6 \times 5 \times 4 \times 3 \times 2 \times 1 \times 43 \times 42 \times 41 \times 40 \dots$  etc down to  $\dots 4 \times 3 \times 2 \times 1$ .

It all seems awful but DON'T PANIC! The fun part is that monstrous sums like these cancel themselves to bits and you can actually rip through them really quickly. This one produces the answer that there are 13,983,816 combinations in total, and only ONE of them will win you the jackpot. So your chances of winning the jackpot are 1 in 13,983,816.

By the way, in the New Zealand lottery you choose 6 numbers from 1-40 so the total number of combinations is:

This makes your chances of winning the New Zealand jackpot 1 in 3,838,380, so you're almost four times as likely to win.

$${}^{40}C_6 = \frac{40!}{6! \times 34!}$$

## SO THE ODDS ARE LOW – Is there a smarter way to play?

Everyone dreams of winning a life changing amount of money playing the lottery but with low odds like those above, it still remains a dream for many.

So is there a **smarter way to play?**, which **will** increase your odds of winning substantially?.

**Yes!**

It's a known fact that syndicates offer a greater chance of sharing money from a lottery. Camelot, operators of the UK National Lottery, say 1 in 4 jackpots are won by syndicates, so they are the most effective way of winning the Lotto.

Syndicates are not a new concept, but as we've said they certainly do enhance your chances of winning.

So, it was on this premise that in early 2002 Len Fitzgerald and Tom Brodie launched a potential **Multi-Win Syndicate System**, initially for the UK Lotto, and later for the Euro Millions, offering players, using their inspired system an increased advantage over playing the normal way.

### So why would a lottery player want to play this way?

1. Their syndicate is guaranteed to match at least one number in every UK Lotto draw, and BOTH "Lucky Star" numbers in every EuroMillions draw. This means their syndicate is **7 times** more likely to win the UK Lotto jackpot than as an individual playing on their own, and **36 times** more likely to win the EuroMillions jackpot!
2. They get a share of **44 entries** of each UK Lotto draw (**that's 88 lines per week**) or **36 entries** into each EuroMillions draw every week.
3. Their syndicate can win on multiple lines, so they get a share of **more than one prize.**
4. It's a completely **MANAGED** syndicate, so their numbers are **automatically** entered into every draw, so no queuing at the newsagents or forgetting to check their numbers. No forgetting to buy their ticket. or even worse, losing it!
5. [e-lottery](#) are one of the **LEADING** online lottery brands, and a respected member of the [Lotteries Council of Great Britain](#).

Almost 7 years on, [e-lottery](#) is more popular than ever, with the added bonus of other world-class lotteries joining the fold, making 2010 and beyond very exciting growth years for the company.

**Sounds great but what can I do to increase my chances?**

**Simple – Become a member of e-lottery!**

**But before you do – [Watch this movie..](#) Then come back here and discover something even more interesting!**

## Welcome back! Something even more interesting!

What a brilliant concept eh? I guess by now you have probably got your membership and are looking forward to playing in the next games with all those increased chances of winning!

Remember before you watched the movie I told you I would share with you something even more interesting?

Well as a member of an e-lottery syndicate, there's not only the increased chances – oh no! There's so much more..

### Golden Tickets

You could pocket **a big fat share** of a massive jackpot in several of the world's richest, tax-free lotteries.

And you can **grab yourself a clutch** of GOLDEN TICKETS.

The more syndicates you join the better your chances of landing a massive share ... and the more Golden Tickets you'll collect.

Golden Tickets are your personal entry into a SENSATIONAL draw held every four weeks. It offers you some incredible prizes. And they're **all FREE!**

### Swap prizes for cash!

You can even **swap** your prizes **for cash!**

To be in with a shout, you simply have to play in one or more e-lottery syndicates. The more syndicates you join, the more Golden Tickets you get ... and the more you boost your chances.

You could easily win the lottery and a scoop a Golden Ticket prize **AT THE SAME TIME!**

You get **ONE** Golden Ticket every time you enter UK Lotto and EuroMillions syndicates. And you get **FOUR** Golden Tickets for every entry you make into a Spanish Superdraw syndicate.

Play in a Spanish Superdraw syndicate and any one other lottery and you'll pick up **extra BONUS tickets too.**

## FREE Tickets For YOU!

Golden Tickets **are totally free** for every e-lottery syndicate player.

It's e-lottery's way of saying a **BIG GOLDEN Thank You** to you for playing the super lotteries the surefooted e-lottery way.

If you won **really BIG** ... what would be the first thing you'd do?

You'd probably play the lottery even harder, hunt for even bigger prizes and earn yourself even more Golden Tickets!

### Grab a Grand

Twice a week you can enter the FREE Grab a Grand prize draw where you pick your own 5 numbers!

So as you can see, there's much more to being an e-lottery syndicate members than merely playing the games with increased chances of winning!

But wait, there's even more..

## How would YOU like to own your own lottery terminal?

Imagine it was YOU who was selling the lottery tickets every week!

Well e-lottery also has an affiliate program attached to it, which you can participate in at no cost! It's a bit like owning your own lottery terminal..

But don't panic, there's no expensive equipment to purchase, nor do you have to own a shop! The e-lottery affiliate program is a fully automated online system.

e-lottery does not use expensive forms of advertising to promote the games, they have affiliates or 'Agents' who simply 'share' e-lottery with their friends, family, business contacts – Anyone in fact!

The companies affiliates can earn some cash simply by recommending the games.

There's no cost to join as an 'Agent' It's simple and easy to do and as it's free, you might as well do it.

Then when someone asks you about e-lottery, you can send them to the website that the company provides for you and who knows, after a while your playing costs could be covered!

Keep on sharing e-lottery with others and who knows, you could be earning a nice part time 2<sup>nd</sup> income!

To find out more and get your free affiliate website, [click here](#) then come back and I'll share with you some more exciting things about e-lottery!

But don't take my word for it, see what some of the existing affiliates have to say about it, simply [click here and get excited!](#)

### **Sounds interesting but how do I find people to play the games?**

What I'm about to share with you now is a simple easy to do 'System' that will find people for you on auto-pilot!

#### **How?**

Just simply give people a free copy of this report!

Go the next page where I will show you how to easily make this report your

## **24/7 “Digital Sales Machine!”**

**But before I do that, I must thank all the people who have helped contribute to this report. Please visit our partner sites below because they may have just what you have been looking for!**

[Website 1](#)

[Website 2](#)

[Website 3](#)

**Now let's go discover that 'Digital Sales Machine' I promised you...**

# How To Make This Report Your 24/7 “Digital Sales Machine!”

I hope you enjoyed this free report and at least took a look at the [e-lottery movie](#)

*Before you rush off to share this report with your Facebook friends and Twitter followers, let me ask you a question...*

Would you like to get paid a commission when the people you share this report with also play in an e-lottery syndicate?

If so, then all you have to do is rebrand this special report with your affiliate ID before sharing it with others. That's it. You can then post it to your blog, share it on Facebook and Twitter, or even use it to build your list.

*And here's the best part...*

Your readers will also receive “giveaway rights” to this report. Which means, if they give it away *without* rebranding it ( *and many will* ) you'll get paid commissions on ALL of their referred sales as well.

Example: Let's say “Stephanie” downloads your report, but *does not* rebrand it with her ID. She then shares YOUR branded version with Bill who plays in an e-lottery syndicate — guess what? YOU just got paid\*... *Cha-ching!*

Get excited! Because you're about to unleash your own “digital sales machine” that cranks out commissions for you 24/7 ( *even while you sleep!* )

*Even if you don't want to join e-lottery, you can still make money or promote your websites using this report! You can simply re-brand it with up to 3 of your own website links then simply give it away!*

## **Here's what to do next...**

**Step 1:** Get FREE Branding Rights from [this link](#).

**Step 2:** Just fill out a short form and you will receive an email with a link to your rebranded report.

**Step 3:** Start sharing your new report with others and **GET PAID\***

\*Full terms and conditions plus affiliate commission plans available on the e-lottery website

This report was produced by an independent e-lottery affiliate
